Art Unit 1713

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-3 and 6-9 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Snell taken alone or in view of Pollock.

The Snell patent is directed to stabilizing compositions or chlorine containing resins. See the Abstract and column 2 lines 1+. This patent further teaches the incorporation of mercaptan compounds in combination with zinc chloride. See specifically the Abstract and column 4 lines 1+. The Examiner maintains that the instantly claimed combination is rendered prima facie obvious from this disclosure.

The Pollock patent is cited as more clearly showing the instantly claimed mercaptans in combination with polyvinyl chloride polymers. This patent further suggests the use of co-stabilizers which can include zinc metal salts. See specifically column 10 lines 10+. As such, it would be prima facie obvious to utilize the mercaptan stabilizers of Pollock in the compositions

of Snell given that they are recognized co-stabilizers to be used in combination with zinc salts.
